

5 Signs Your AI Strategy Needs Governance to Scale

1 You Have a Growing Backlog of AI Pilots with No Path to Deployment

- Multiple models are stuck in pilot mode with no clear process for approval, rollout or scale
- Teams lack clarity on ownership and next steps, leading to stalled innovation

2 You're Prioritizing AI Projects Without Strategic or ROI-Based Criteria

- AI investments are driven by vendor push or individual champions—not enterprise goals
- High-potential use cases are delayed while lower-value projects consume resources

3 You're Struggling to Measure the Value of Deployed AI Tools

- There's limited insight into clinical, operational, or financial outcomes
- You're measuring model performance, but not impact on care, efficiency, or financial outcomes

4 Teams Are Duplicating Efforts Across Sites or Departments

- Multiple groups are working in silos on similar tools or use cases
- Redundant contracts and disconnected data streams are wasting time and budget

5 Compliance Risks are Holding Back Innovation

- Without clear guardrails in place, your team is saying no to cutting-edge AI tools
- Monitoring for bias, drift, and safety is manual, inconsistent, or missing entirely
